

# Acid Stain Color Chart

**Limitations and Restrictions:** The Nine standard colors shown are for applications gray cement based products. The color chart is to be used as a guideline, while test areas or samples are always recommended prior to job application as they may differ significantly from what is shown. Concrete Depot Patina Stains will produce a wide variety of finished colors depending on many factors including, but not limited to, age of existing slab, mix design, finishing techniques, base colors of concrete and permeability of surface. Being a translucent product, the overall effects of the Concrete Depot Stain system leaves an element of unpredictability as to the final appearance and effects of the stain used. Refer to the Patina Stains Technical data sheets for additional information.

All of the above colors are accurate. Due to computer monitor differences Concrete Depot cannot guarantee that these images appear accurate on your screen. Please order a printed color chart for reference if you have any doubts at the accuracy of the colors.
